

ASSIGNMENT-4A

jQuery Mobile 1.4.5 DEMOS

Navbar

jQuery Mobile has a very basic navbar widget that is useful for providing up to 5 buttons with optional icons in a bar.

Navbar basics

A navbar is coded as an unordered list of links wrapped in a container element that has the `data-role="navbar"` attribute. When a link in the navbar is clicked it gets the active (selected) state. The `ui-btn-active` class is first removed from all anchors in the navbar before it is added to the activated link. If this is a link to another page, the class will be removed again after the transition has completed.
